1. Introduction

F1 Solutions has continued to develop OmniStar system for clients around Australia over the years.

OmniStar 4.4.1 is an intermediate update in addition to the regular releases to address clients' high priority requirements. In this version, we have implemented improvements to optimise business process and enhance system usability. The following section describes in details information about changes that are available in this release.

If you would like to know more about any of these features, please contact F1 Solutions to discuss and arrange a demonstration.

Regards
The Omni Team at F1 Solutions

2. Featured Changes

2.1 Round and Application Reference Filters

Round and Application Reference are added as search criteria for Process Decision screen to provide Secretariats more flexibility in searching for Applications, reducing the possibilities of processing incorrect Applications.

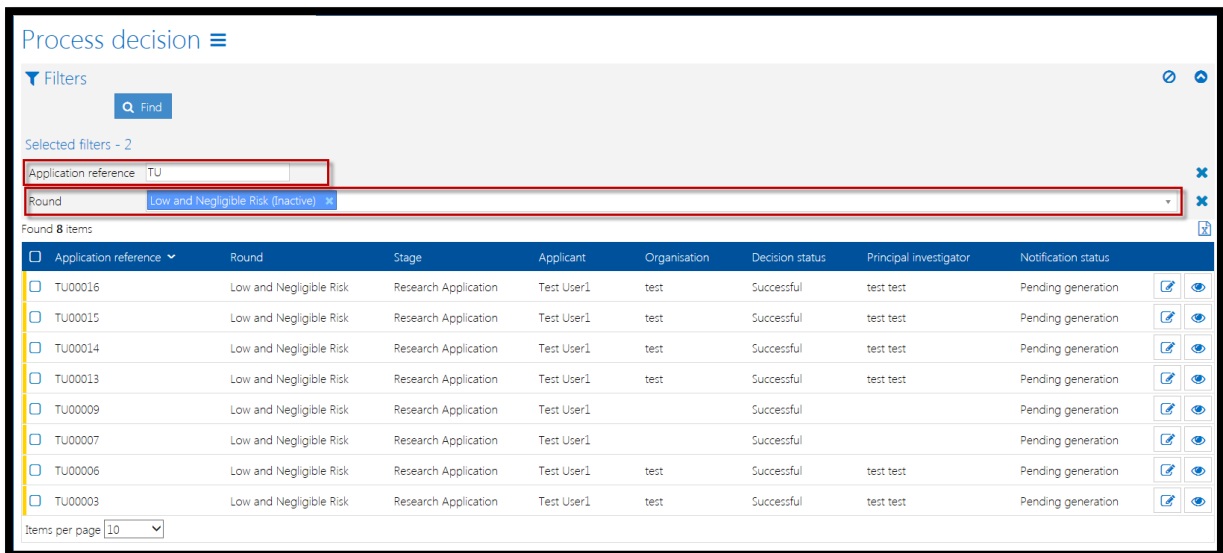

Figure 1 Filters for Process Decision screen - Application Reference and Found

2.2 Start Date/Time and End Date/Time for Round Stages

With the newly added fields Start Date/Time and End Date/Time, Secretariats can specify a timeframe for each Round Stage for better round management.

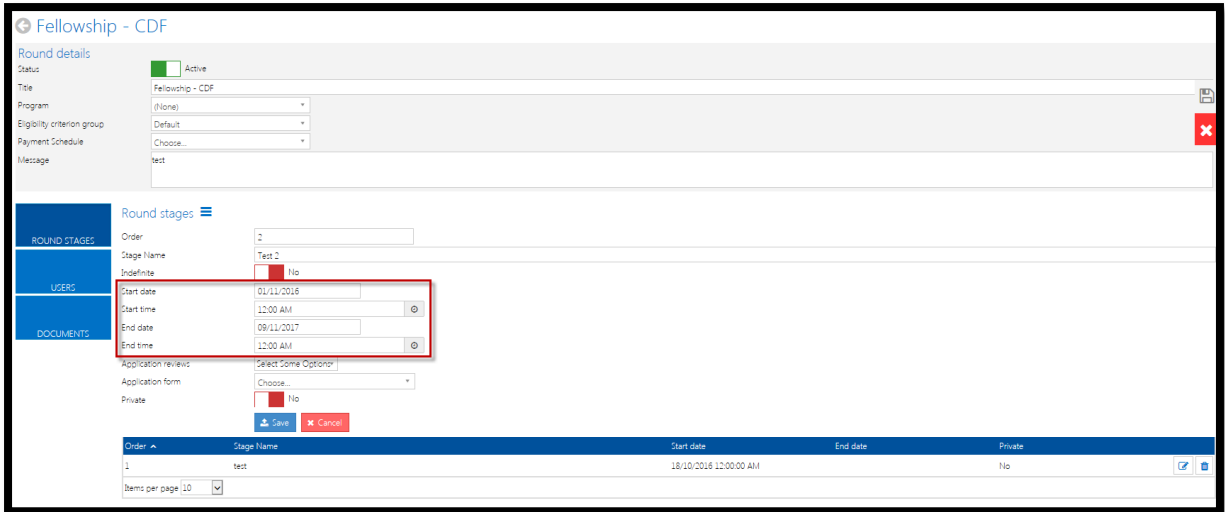

Figure 2 Start Date/Time and End Date/Time for Round Stage

2.3 Reporting Database New Table - Round Stage

The new table Round Stage is added to the report database to improve reporting capability. Information about Start Date and End Date is moved from the existing Round table to Round Stage table as the timeframe is now associated per each Round Stage instead of each Round.

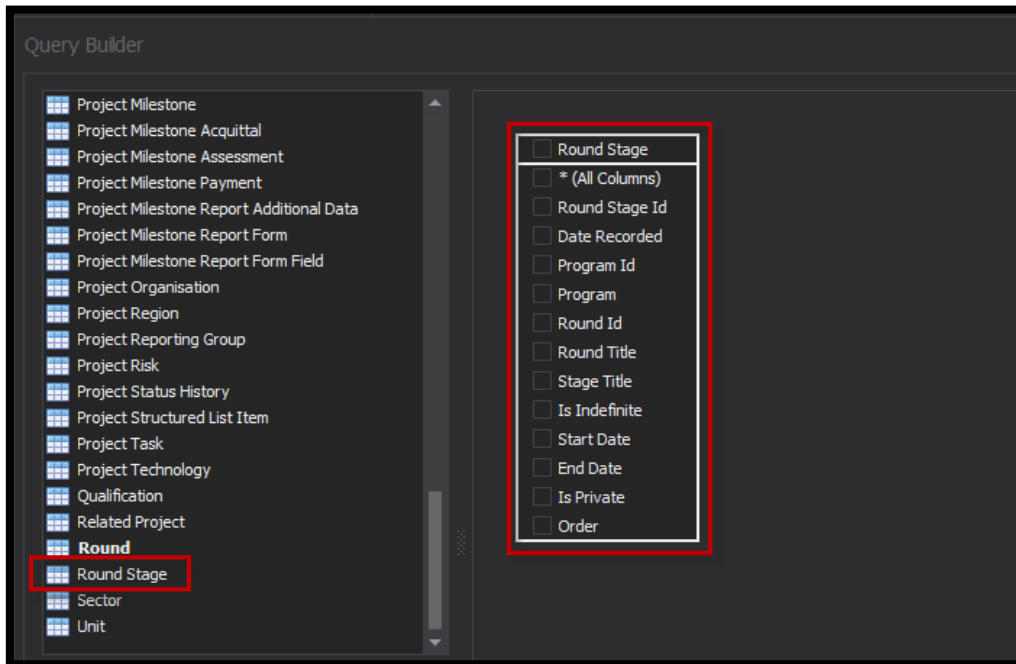

Figure 3 Round Stage table in the Reporting Database

2.4 Session Timer Hover Text

In this version, a description is shown when users hover over the session timer. This text can be customised by Administrators to fit the clients' context under *System Settings >> Administrations >> Resource Strings >> Net* with resource key *SessionTimeoutHint*.

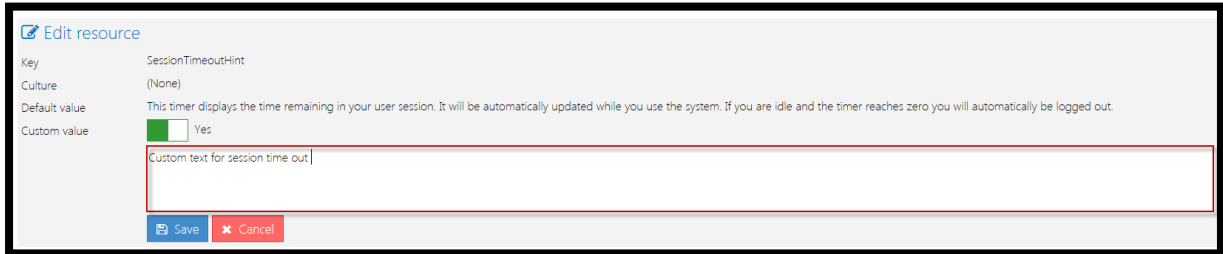

Figure 4 Customise hover text for session timer

Users will then need to trigger Invalidate resources.

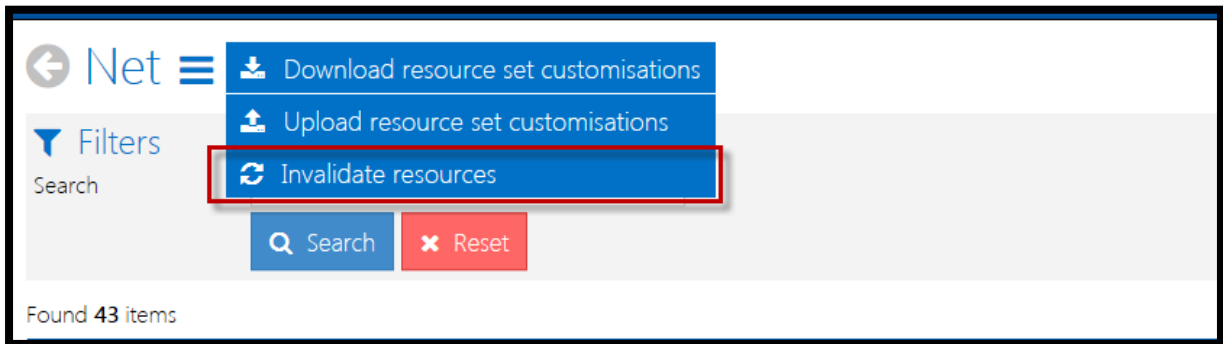

Figure 5 Invalidate resources after a change in the resource

System will show the custom text at the session timer.

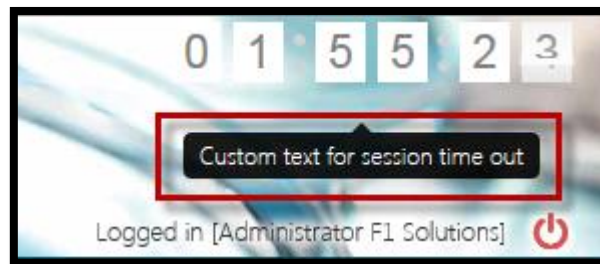

Figure 6 Custom text shown when hovering at the session timer

2.5 Audit Log and Event Log Time Filtering

Administrators are now able to filter Audit Log and Event Log between time periods, allowing them to find logs more quickly if the time periods are known.

Figure 7 Time filters for Audit Log

Figure 8 Time Filters for Event Log

2.6 .Omni File Download in Application

In this version, Applicants (including registered and guest users) can download the Application that they are working on and save as .omni file. Applicants will need to click on the Save button on the top right corner of the application that they are working on.

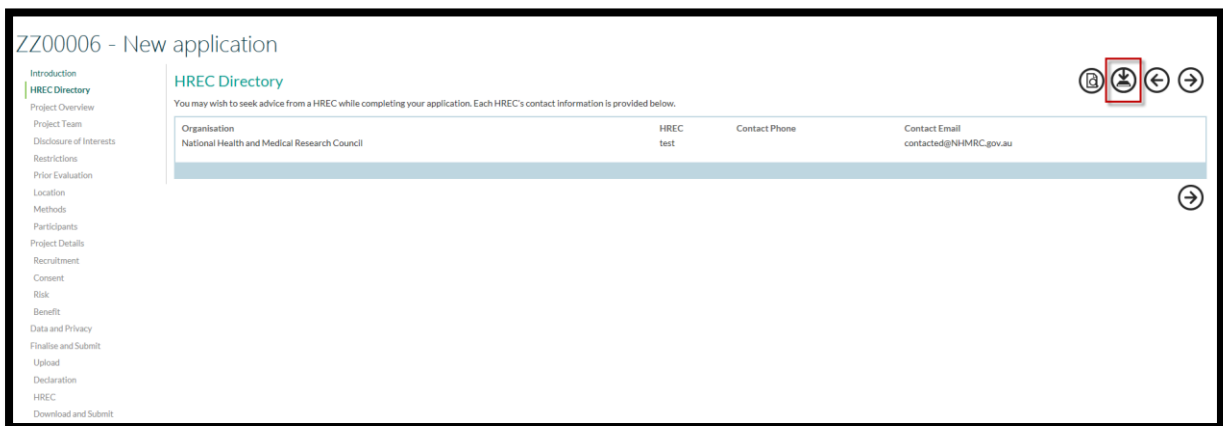

Figure 9 Save an application

A Download message box will appear with the option to download the application.

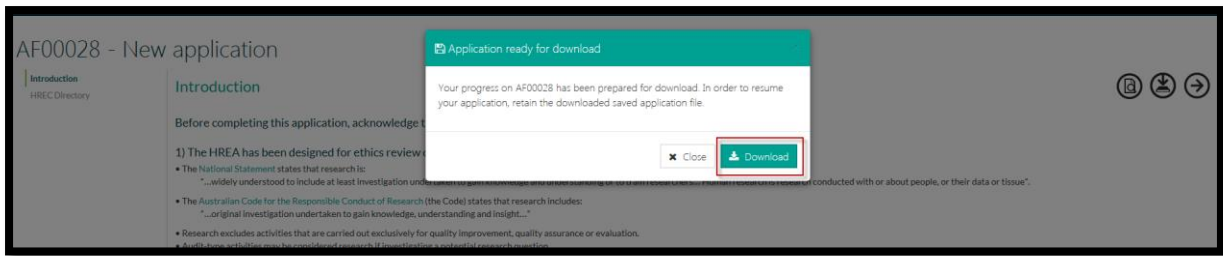

Figure 10 Download an application

2.7 Application ID and Application Title in Application Forms

Application ID and Application Title are displayed on top of the application form to provide Applicants with more descriptive information about the forms that they are working on.

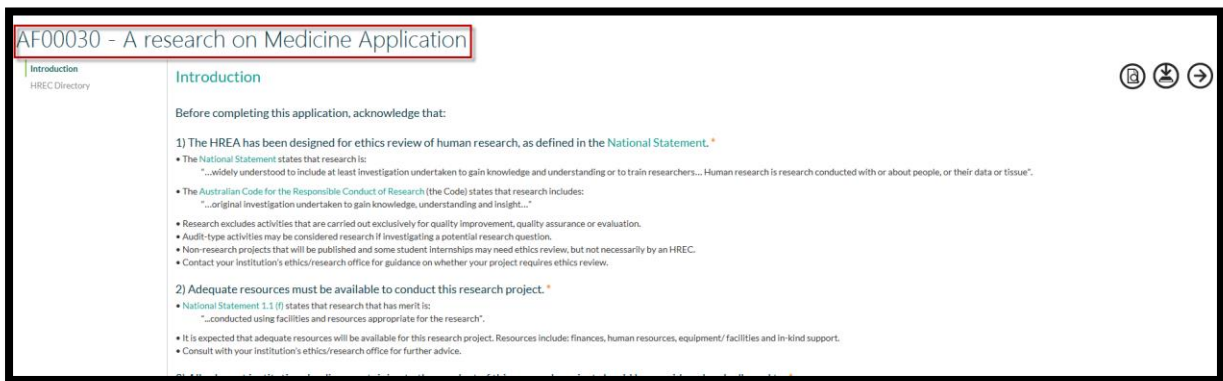

Figure 11 Application ID and Application Title on top of Application Form

2.8 Customisable Logon Page and Information Page

With this new feature, Administrators are able to customise the Logon Page and Information Pages with the desired contents, layout or UI elements. This provides Administrators control over the contents of the Logon and Information Page, and make changes on the fly without interrupting the system.

Pages can be maintained in *Administration/ Pages*. Administrators can set to inactive, view or edit the page.

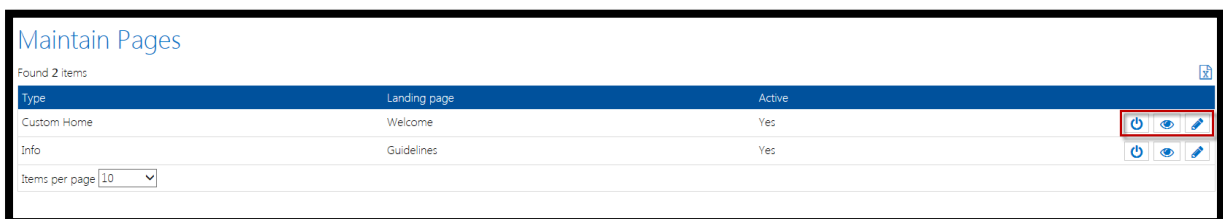

Figure 12 Maintain Pages

Administrators can also set the page to Edit mode with the Edit button at the bottom left corner of the page.

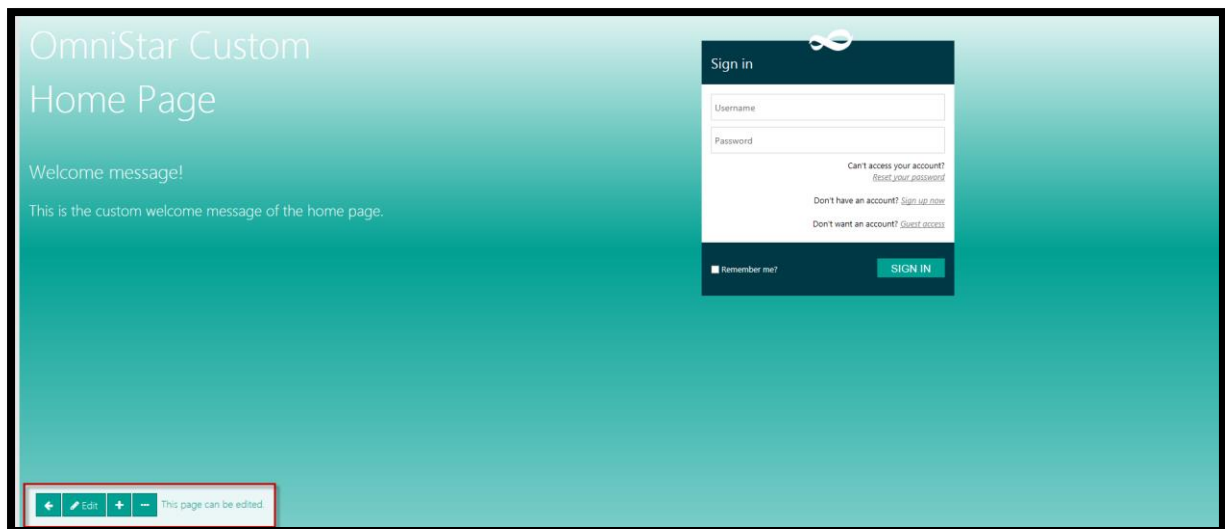

Figure 13 Edit button

On editing, system will open the selected page in edit mode in a new tab of the currently used browser. In this mode, Administrators can change layout, update contents or add/ remove UI controls. Available controls include rows, columns, Logon control and rich text editor with the ability to embed image and video to the page. Changes made to the page will take effect instantly when the page is saved.

2.9 Configurable Application/Project Identifier

In previous version, Application and Project Identifiers, whilst configurable had to be managed by Technical Administrations. In this new version, the power to change Application and Project Identifiers have been provided to System Administrators. This feature allows them to specify the syntax of the Application and Project Identifier using a variety of available tokens including Unique Identifier (running numbers), Applicant's Initial, Round Number, Program Abbreviation, Financial Year, Calendar Year and Free Text.

Manage Identifiers can be found in *System Settings/ Administration/ Manage Identifiers*.

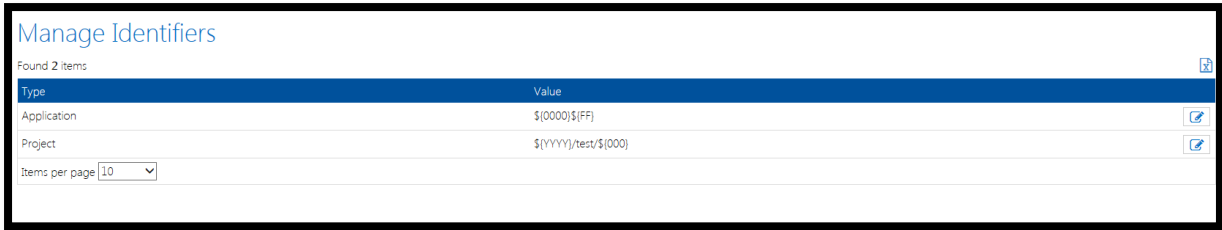

Figure 15 Manage Identifiers

To change the identifier syntax, click on Edit button for Application or Project Identifier. Administrators can select available tokens by moving the cursor to Identifier format field and click on the tag icon (🏷️). System will display a list of tokens which users can select from. This token selection functionality is also available automatically by typing `#{`.

2.10 Acquittal Data in Data Migration Wizard

In this version, we have enhanced the Data Migration tool to allow Administrators to migrate acquittal data. A new template named "Project Milestone Acquittal" is added to the list of templates available for download in the Download Templates screen. The download template is pre-populated with all required fields and additional payment related information to assist users to populate acquittal data. Documents associated with the Acquittal are also able to be uploaded in bulk using this functionality.
