Proven track record

Challenges faced in business, government and not-for-profits are often unique and complex. Our software solutions are smart, secure and simple taking the complexity away from end users and embedding smarts within the solution itself.

F1 Accelerate produced Australia's first Electronic Polling Place Management System, which is still in use. We're immensely proud that our own OmniStar software, the sophisticated system that drives much of the nation's grants, research and ethics programs, is still experiencing powerful growth after more than 15 years of industry use and development. And TravelPack is our one-of-a-kind government travel budget tool that currently streamlines the travel administration workload in more than 30 government agencies.

During decades in business we have delivered smart solutions for online shops, major business process systems, websites and government that helps to empower our customers through easy-to-use solutions. We're thrilled that our track record speaks for itself.

F1 Accelerate®
Fast track success with bespoke software solutions

Good Technology

F1 Solutions is a leading technology provider and our solid software engineering core competencies have been powering our client's growth and success for over 25 years. We make technology simple and intelligent so that it enriches citizens daily lives. Our vision is to help businesses stay competitive with disruptive ideas that change the world. At our core, we bring 'good technology to life'.

F1 Accelerate

F1 Accelerate, the software development division of the F1 Solutions business, delivers quality software solutions to help organisations deliver a more sophisticated, tailored and streamlined user experience, benefiting their customers and users.

Benefits

Automate time-consuming processes

Free up staff to do higher value work

Make your software work the way you do

Drive strategy with the right tools

Attract and retain great staff with good technology

Exploit the power of data analysis

We get your systems talking

Custom software won't succeed in its strategic function if it doesn't align or integrate with your existing systems already in operation. Our analysts and architects approach every system with a pragmatic eye to ensure your software is tailored to your specific needs and engineered to maximise value.

We use industry-leading tools specialising in Microsoft and Content Management System such as WordPress and Umbraco solutions. A range of tools and technologies are used to deliver state of the art capabilities for our clients including Azure and AWS services, Visual Studio, Azure DevOps, Angular, React, Octopus, Katalon, Knockout, Aurelia, NodeJS, SharePoint and SQL Server. As we're a long-time certified Microsoft Gold Partner and Select Consulting Partner of AWS, many solutions (including our own SaaS offerings) are hosted with AWS or Azure.

Over several decades we have seen and helped to create multiple examples of best practice software solutions. So whether it's a small set of improvements or a full-scale, line-of-business application, we've got the experience and expertise to make your software work for you

Custom software

In an environment fuelled by data, smart businesses demand software that works for them. When COTS doesn't fit, we use new tech to build high-performance software to drives them into the future.

Consultancy services

We're your solutions team. It's essential to bring in the subject matter experts to mange, design, architect, build and test the perfect solution. We have expertise (to name a few) in project management, AWS and Azure clouds architecture and implementation, Microsoft .Net architecture and development, automated and manual testing, load, performance and stress testing and business and systems analysis. Whatever your needs, we can provide individual or a team of experts to understand and solve your challenge.

Augmenting your team

Boost your software capabilities. We have 25 years of experience of delivering technology projects, large and small, and introducing positive change into organisations. We can put together a dedicated team to supplement your existing capabilities to work as an extension of your team and skills. Whether you're working on a short time constrained or multi-year implementation, we can provide that much needed boost to your project.

Support & maintenance

We go well beyond delivery of the solution to provide on going support and maintenance of software solutions either that we have built or that need our support. We also specialise in transitioning legacy applications to new platforms and technologies.
